TOXICOLOGY

Subject Index Volume 88 (1994)

A549 cells, cell proliferation, growth inhibition, buthionine sulfoximine, glutathione, cystine accumulation, 177
air pollution, ozone, cell culture, 51
alkaline elution, dose-response, thresholds, chemical carcinogenesis, risk assessment, DNA damage, 31
antioxidants, lipid peroxidation, kidney, iron, mitochondria, α-tocopherol, 141
apoptosis, cadmium, programmed cell death, Verapamil, T cell line, 127
axoplasmic flow, metals, mercury, lead, cadmium, neuron, 1

B-cell, carbon tetrachloride, immune suppression, serum factor, 210
buthionine sulfoximine, cell proliferation, growth inhibition, A549 cells, glutathione, cystine accumulation, 177

cadmium, apoptosis, programmed cell death, Verapamil, T cell line, 127
cadmium, axoplasmic flow, metals, mercury, lead, neuron, 1
cadmium, cytokines, cytotoxicity, endothelium, endothelial cells, transforming growth factor beta, 69
carbon tetrachloride, immune suppression, B-cell, serum factor, 210
cell culture, ozone, air pollution, 51
Cell proliferation, growth inhibition, buthionine sulfoximine, A549 cells, glutathione, cystine accumulation, 177
cell-mediated immunity, dioxin, TCDD, cytotoxic lymphocyte, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, immunotoxicity, 213
chemical allergy, respiratory allergy, mast cells, T lymphocytes, cytokines, 225
chemical carcinogenesis, dose-response, thresholds, risk assessment, DNA damage, alkaline elution, 31
coumarin, methyl analogues, hepatotoxicity, rats, hepatocytes, lobar variation, 113
cystine accumulation, Cell proliferation, growth inhibition, buthionine sulfoximine, A549 cells, glutathione, 177
cytokines, cadmium, cytotoxicity, endothelium, endothelial cells, transforming growth factor beta, 69
cytokines, chemical allergy, respiratory allergy, mast cells, T lymphocytes, 225
cytotoxic lymphocyte, dioxin, TCDD, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, immunotoxicity, cell-mediated immunity, 213
cytotoxicity, cadmium, cytokines, endothelium, endothelial cells, transforming growth factor beta, 69

dichlorovinylcysteine, poly(ADP-ribosyl)ation, DNA double-strand breaks, nephrocarcinogenesis, potassium bromate, ferric nitrilotriacetate, dimethylnitrosamine, trimethylpentane, 101
dimethylnitrosamine, poly(ADP-ribosyl)ation, DNA double-strand breaks, nephrocarcinogenesis, dichlorovinylcysteine, potassium bromate, ferric nitrilotriacetate, trimethylpentane, 101
dioxin, TCDD, cytotoxic lymphocyte, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, immunotoxicity, cell-mediated immunity, 213
diphenylmethane-4,4′-diisocyanate, respiratory hypersensitivity, inhalation exposure, guinea pigs, 15
DNA damage, dose-response, thresholds, chemical carcinogenesis, risk assessment, alkaline elution, 31
DNA double-strand breaks, poly(ADP-ribosyl)ation, nephrocarcinogenesis, dichlorovinylcysteine, potassium bromate, ferric nitrilotriacetate, dimethylnitrosamine, trimethylpentane, 101
dose response glutathione *S*-transferase, human liver, GST inhibitors, 191
dose-response, thresholds, chemical carcinogenesis, risk assessment, DNA damage, alkaline elution, 31

SSDI 0300-483X(93)002839-M

endothelial cells, cadmium, cytokines, cytotoxicity, endothelium, transforming growth factor beta, 69
endothelium, cadmium, cytokines, cytotoxicity, endothelial cells, transforming growth factor beta, 69

ferric nitrilotriacetate, poly(ADP-ribosyl)ation, DNA double-strand breaks, nephrocarcinogenesis, dichlorovinylcysteine, potassium bromate, dimethylnitrosamine, trimethylpentane, 101

glutathione, cell proliferation, growth inhibition, buthionine sulfoximine, A549 cells, cystine accumulation, 177
glutathione *S*-transferase, human liver, GST inhibitors, 191
growth inhibition, cell proliferation, buthionine sulfoximine, A549 cells, glutathione, cystine accumulation, 177
GST inhibitors, glutathione *S*-transferase, human liver, 191
guinea pigs, respiratory hypersensitivity, inhalation exposure, diphenylmethane-4,4′-diisocyanate, 15

halogenated hydrocarbons, nephrotoxicity, succinimides, rats, 151
hepatocytes, coumarin, methyl analogues, hepatotoxicity, rats, lobar variation, 113
hepatotoxicity, coumarin, methyl analogues, rats, hepatocytes, lobar variation, 113
n-heptanol, nose, sensory irritation, trigeminus, *n*-pentanol, *sec*-butanol, *tert*-pentanol, structure-activity relationships, mice, 81
human liver, glutathione *S*-transferase, GST inhibitors, 191

immune suppression, carbon tetrachloride, B-cell, serum factor, 210
immunotoxicity, dioxin, TCDD, cytotoxic lymphocyte, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, cell-mediated immunity, 213
inhalation exposure, respiratory hypersensitivity, diphenylmethane-4, 4′-diisocyanate, guinea pigs, 15
iron, lipid peroxidation, kidney, mitochondria, antioxidants, α-tocopherol, 141

kidney, lipid peroxidation, iron, mitochondria, antioxidants, α-tocopherol, 141

lead, axoplasmic flow, metals, mercury, cadmium, neuron, 1
lipid peroxidation, kidney, iron, mitochondria, antioxidants, α-tocopherol, 141
lobar variation, coumarin, methyl analogues, hepatotoxicity, rats, hepatocytes, 113

mast cells, chemical allergy, respiratory allergy, T lymphocytes, cytokines, 225
mercury, axoplasmic flow, metals, lead, cadmium, neuron, 1
metals, axoplasmic flow, mercury, lead, cadmium, neuron, 1
methyl analogues, coumarin, hepatotoxicity, rats, hepatocytes, lobar variation, 113
mice, nose, sensory irritation, trigeminus, *n*-pentanol, *n*-heptanol, *sec*-butanol, *tert*-pentanol, structure-activity relationships, 81
mitochondria, lipid peroxidation, kidney, iron, antioxidants, α-tocopherol, 141
molsidomine, nitric oxide, SIN-1, nitrovasodilators, sydnonimines, 165

nephrocarcinogenesis, poly(ADP-ribosyl)ation, DNA double-strand breaks, dichlorovinylcysteine, potassium bromate, ferric nitrilotriacetate, dimethylnitrosamine, trimethylpentane, 101
nephrotoxicity, succinimides, halogenated hydrocarbons, rats, 151
neuron, axoplasmic flow, metals, mercury, lead, cadmium, 1
nitric oxide, SIN-1, molsidomine, nitrovasodilators, sydnonimines, 165
nitrovasodilators, nitric oxide, SIN-1, molsidomine, sydnonimines, 165
nose, sensory irritation, trigeminus, *n*-pentanol, *n*-heptanol, *sec*-butanol, *tert*-pentanol, structure-activity relationships, mice, 81

ozone, cell culture, air pollution, 51

n-pentanol, nose, sensory irritation, trigeminus, *n*-heptanol, *sec*-butanol, *tert*-pentanol, structure-activity relationships, mice, 81
poly(ADP-ribosyl)ation, DNA double-strand breaks, nephrocarcinogenesis, dichlorovinylcysteine, potassium bromate, ferric nitrilotriacetate, dimethylnitrosamine, trimethylpentane, 101
potassium bromate, poly(ADP-ribosyl)ation, DNA double-strand breaks, nephrocarcinogenesis, dichlorovinylcysteine, ferric nitrilotriacetate, dimethylnitrosamine, trimethylpentane, 101
programmed cell death, cadmium, apoptosis, Verapamil, T cell line, 127

rats, coumarin, methyl analogues, hepatotoxicity, hepatocytes, lobar variation, 113
rats, nephrotoxicity, succinimides, halogenated hydrocarbons, 151
respiratory allergy, chemical allergy, mast cells, T lymphocytes, cytokines, 225
respiratory hypersensitivity, inhalation exposure, diphenylmethane-4,4′-diisocyanate, guinea pigs, 15
risk assessment, dose-response, thresholds, chemical carcinogenesis, DNA damage, alkaline elution, 31

sec-butanol, nose, sensory irritation, trigeminus, *n*-pentanol, *n*-heptanol, *tert*-pentanol, structure-activity relationships, mice, 81
sensory irritation, nose, trigeminus, *n*-pentanol, *n*-heptanol, *sec*-butanol, *tert*-pentanol, structure-activity relationships, mice, 81
serum factor, carbon tetrachloride, immune suppression, B-cell, 210
SIN-1, nitric oxide, molsidomine, nitrovasodilators, sydnonimines, 165
structure-activity relationships, nose, sensory irritation, trigeminus, *n*-pentanol, *n*-heptanol, *sec*-butanol, *tert*-pentanol, mice, 81
succinimides, nephrotoxicity, halogenated hydrocarbons, rats, 151
sydnonimines, nitric oxide, SIN-1, molsidomine, nitrovasodilators, 165

T cell line, cadmium, apoptosis, programmed cell death, Verapamil, 127
T lymphocytes, chemical allergy, respiratory allergy, mast cells, cytokines, 225
TCDD, dioxin, cytotoxic lymphocyte, 2,3,7,8-tetrachlorodibenzo-*p*-dioxin, immunotoxicity, cell-mediated immunity, 213
tert-pentanol, nose, sensory irritation, trigeminus, *n*-pentanol, *n*-heptanol, *sec*-butanol, structure-activity relationships, mice, 81
2,3,7,8-tetrachlorodibenzo-*p*-dioxin, dioxin, TCDD, cytotoxic lymphocyte, immunotoxicity, cell-mediated immunity, 213
thresholds, dose-response, chemical carcinogenesis, risk assessment, DNA damage, alkaline elution, 31
α-tocopherol, lipid peroxidation, kidney, iron, mitochondria, antioxidants, 141
transforming growth factor beta, cadmium, cytokines, cytotoxicity, endothelium, endothelial cells, 69
trigeminus, nose, sensory irritation, *n*-pentanol, *n*-heptanol, *sec*-butanol, *tert*-pentanol, structure-activity relationships, mice, 81
trimethylpentane, poly(ADP-ribosyl)ation, DNA double-strand breaks, nephrocarcinogenesis, dichlorovinylcysteine, potassium bromate, ferric nitrilotriacetate, dimethylnitrosamine, 101

Verapamil, cadmium, apoptosis, programmed cell death, T cell line, 127

(*Contents continued from outside back cover*)

Acute *N*-(3,5-dichlorophenyl)succinimide nephrotoxicity in female Fischer 344 rats **(Female rats are more susceptible and the site of the renal lesion is gender dependent)**
G.O. Rankin, K.W. Beers, V.J. Teets, D.W. Nicoll, D.K. Anestis, P.I. Brown, R.-T. Wang (Huntington, WV) 151–164

An impurity present in some samples of SIN-1 oxidizes it to nitric oxide in anaerobic solutions **(SIN-1 appears not to react directly with hemoglobin)**
Y. Wang, L.G. Rochelle, H. Kruszyna, R. Kruszyna, R.P. Smith, D.E. Wilcox (Hanover, NH) . 165–176

Exogenous glutathione attenuates the antiproliferative effect of buthionine sulfoximine **(The antiproliferative effect of BSO could be caused by inhibition of cystine uptake)**
Y.J. Kang (Grand Forks, ND) 177–189

Inter-individual variability of human hepatic glutathione *S*-transferase isozymes assessed by inhibitory capacity **(Using a substrate specific for one of the three GST isoenzymes activity in four of 17 samples is about 20-fold lower suggesting genetic variation)**
Y. Takamatsu, T. Inaba (Toronto, Canada) 191–200

Induction of serum borne immunomodulatory factors in B6C3F1 mice by carbon tetrachloride. Exposure to carbon tetrachloride produces an increase in B-cell number and function **(While exposure to CCl_4 appears to suppress T-cell dependent immune responses, it enhances the activity of B-cells)**
B. Delaney, N.E. Kaminski (Richmond, Virginia; East Lansing, MI) 201–212

Immunotoxicology

Evaluation of the effect of low-level 2,3,7,8-tetrachlorodibenzo-*p*-dioxin exposure on cell mediated immunity **(Low levels of TCDD decrease thymus weight and suppress PFC but not in vivo- or in vitro-generated CTL responses in mice)**
C.D. Hanson, R.J. Smialowicz (Chapel Hill and Research Triangle Park, NC) 213–224

Cytokine-mast cell interactions: relevance to IgE-mediated chemical allergy **(The role of cytokines in specific IgE-dependent mast cell sensitization is reviewed)**
J.W. Coleman, M.R. Holliday, R.J. Dearman, I. Kimber (Liverpool and Macclesfield, UK) 225–235
